"In today's increasingly digitalised world, going digital is no longer a nice to have, it is a must have. Organisations that fail to digitalise their trade and supply chains are likely to be left behind. While going digital does require some resources, it pays off in the medium to long term. “A bill of lading is one of the most critical elements of an international trade transaction. When the content of a bill of lading is manipulated, the risks of fraud, malpractice or money laundering increases significantly for the stakeholders relying upon it — these include banks, shipping companies and counterparty traders. It is therefore important that NVOCCs understand the key role played by the bill of lading that they issue and the need for them to accurately represent the physical shipment.”
